

Question:

For Halloween Katie and her sister combined the candy they received. Katie had 10 pieces of candy while her sister had 6. If they ate 9 pieces the first night, how many pieces do they have left?

Candidate Answer: 10. (False)

Response:

[A].Explanation:The total number of candies they initially had was 10 (Katie) + 6 (her sister) = 16 candies. After eating 9 pieces on the first night, they would be left with $16 - 9 = 7$ candies. However, the possible answer provided is 10 , which is incorrect. Therefore, my confidence in the correctness of this answer is very low, falling within the 0 - 10% range.
