

### Prompt:

[...] these are six photos taken from the front camera of your vehicle for six consecutive seconds. The time description should be marked in the corresponding subgraph.[...], what actions you performed with force, and why you performed these actions?

### GPT-4V:

[...] the actions that a driver might have taken in this scenario:

Second 01:Image 01 shows a haul truck ahead on the left side, moving in the same direction as I am. Another haul truck is visible in the distance to the right. At this point, I am likely assessing the speed and trajectory of both trucks to ensure safe passage.

Second 02: the haul truck on the left (numbered 30) is closer, and it appears I have maintained my speed and trajectory, staying on the right side of the path to keep a safe distance from the haul truck. It's important to monitor the truck's movements to avoid any potential collision, as such vehicles have large blind spots and may not be able to see smaller vehicles like mine.

Second 03: the haul truck is passing by on the left, and I might have slightly adjusted my position to the right for added safety, giving it ample space. Haul trucks are very large and can create wind gusts that could affect the stability of a smaller vehicle.

Second 04the haul truck (numbered 15) has moved further ahead on the left, and I might be preparing to accelerate slightly as the truck's rear end passes, to ensure that I'm not in its blind spot for longer than necessary.

Second 05:Image 05 shows that truck number 15 is now ahead, and I have clearer space in front of me. This would be a good time to check mirrors for any other vehicles behind me and to adjust speed as needed, now that the immediate obstacle has been safely navigated.

Second 06:,with the haul truck well ahead, I would continue driving at a safe speed[...]. The path ahead looks clear, so I would maintain a steady course and speed, always ready to react if the situation changes.

### Prompt:

What is the your motion process in the series images?

### GPT-4V:

[...],the consistent position of the haul trucks relative to the viewpoint suggests that the vehicle I am driving is moving straight forward. The distance to the trucks ahead appears to be constant or increasing slightly, which would be consistent with driving straight while maintaining a safe following distance.
