

## Prompt:

You are a driver, and you need to make a right U-turn into another lane. You are moving at a relatively low speed. Please describe what you observe and what you should do next.

**Observation:** The first image shows a clear road ahead with no immediate obstacles or heavy traffic. There is a road sign ahead, although its details are not visible, and a truck in the distance moving away from the viewpoint.[...]

**Action:** As a driver preparing for a U-turn, start by checking rear and side mirrors to ensure no vehicles are too close behind or beside your vehicle. [...]

**Observation:** In the second image, the road begins to curve slightly left, with a visible junction and a side road to the right indicated by a road sign. [...]

**Action:** Continue to signal your intention to make the U-turn, and start slowing down. Position your vehicle towards the right of your lane, preparing for the turn. [...]

**Observation:** The third image presents a junction where the road broadens and lane markings are visible, suggesting designated turning areas. There are no vehicles in your immediate path,[...].

**Action:** Reduce your speed further to safely handle the rough road surface and ensure control during the turn. As you near the point of turning, double-check for any oncoming traffic or pedestrians, adjusting your approach as necessary.

**Observation:** By the fourth image, you are mid-turn, with the road visibly curving around, indicating the completion of the U-turn[...].

**Action:** Keep the vehicle at a low speed to smoothly execute the turn. [...].After completing the U-turn, realign your vehicle to the correct lane, adjust to the appropriate speed, and cease signaling as you resume normal driving.
