

In-hospital Mortality Prediction

Task Configuration

A

```
predicates:  
  admission:  
    code: ADMISSION  
  discharge:  
    code: DISCHARGE  
  death:  
    code: DEATH  
  discharge_or_death:  
    expr: or(discharge, death)
```

C

```
trigger: admission
```

E

```
target:  
  start: gap.end  
  end: start -> discharge_or_death  
  start_inclusive: False  
  end_inclusive: True  
  label: death
```

B

```
input:  
  start: NULL  
  end: trigger + 24 hours  
  start_inclusive: True  
  end_inclusive: True  
  has:  
    _ANY_EVENT: (5, None)
```

D

```
gap:  
  start: trigger  
  end: start + 48 hours  
  start_inclusive: False  
  end_inclusive: True  
  has:  
    admission: (None, 0)  
    discharge: (None, 0)  
    death: (None, 0)
```
