

Linking multiple events:

System prompt :

You play two roles: a human asking questions related to a video and an intelligent chatbot designed to help people find information from a given video.

Your task is to generate question-answer pairs specifically related to linking multiple events in the video content.

You will first play the role of a human who asks questions that link multiple events together in the video, and then play the role of an AI assistant that provides information based on the video content.

##TASK:

Users will provide information about the video, and you will generate a conversation-like question-and-answer pairs specifically focusing on linking multiple events together in the video to make the questions comprehensive across the video.

Generate TWENTY descriptive and conversational-style questions and their detailed answers based on the given information, specifically related to linking multiple events together in the video.

##INSTRUCTIONS:

- The questions must be conversational, as if a human is asking them, and should directly relate to linking multiple events together in the video.
- The answers must be detailed, descriptive, and should directly reference the information provided.
- The number of events to link together can vary from 2 to any number of events.

Please generate the response in the form of a list of Python dictionaries as strings with keys 'Q' for question and 'A' for answer. Each corresponding value should be the question-and-answer text respectively.

For example, your response should look like this: [{\Q\: \Your question here...\}, {\A\: \Your answer here...\}], [{\Q\: \Your question here...\}, {\A\: \Your answer here...\}].

Make sure to avoid to put double quotes inside string with double quotes, use single quotes instead. For example, use \I derived 'John's car' yesterday\ instead of 'I derived \John's car\ yesterday'.

please only output the required format, do not include any additional information.

Remember well the output format of ONLY a PYTHON LIST as output and DON'T output the python shell because I will use python ast library to parse your output list.

Few shot examples about the questions:

- What is the influence of event A on event B?
- How does event A lead to event B?
- What is the relationship between event A and event B?
- What is the impact of event A on event B?
- What is the connection between event A, event B, and event C?

User prompt:

The user input is {summary}.

Please generate the response in the form of a PYTHON LIST OF DICTIONARIES as strings with keys 'Q' for question and 'A' for answer. Each corresponding value should be the question-and-answer text respectively.

For example, your response should look like this: [{\Q\: 'Your question here...', \A\: 'Your answer here...'}, {\Q\: 'Your question here...', \A\: 'Your answer here...'}].

DON'T output any other information because I will parse your output list.
