

*Instruction: We need to extract useful features from Russian text for downstream tasks.*

$\mathcal{M}_{Gorilla}$

```
from transformers import AutoModel, AutoTokenizer
model = AutoModel.from_pretrained('DeepPavlov/rubert-base-cased')
tokenizer = AutoTokenizer.from_pretrained('DeepPavlov/rubert-base-cased')
encoded_text = tokenizer(russian_text, return_tensors='pt')
features = model(**encoded_text).last_hidden_state
```

$\mathcal{M}_{SFT}$

```
from transformers import AutoTokenizer, AutoModel
tokenizer = AutoTokenizer.from_pretrained('DeepPavlov/rubert-base-cased')
model = AutoModel.from_pretrained('DeepPavlov/rubert-base-cased')
tokens = tokenizer.encode(russian_text, return_tensors='pt')
features = model(tokens)
```

$\mathcal{M}_{RL}$

```
from transformers import AutoTokenizer, AutoModel
tokenizer = AutoTokenizer.from_pretrained('DeepPavlov/rubert-base-cased')
model = AutoModel.from_pretrained('DeepPavlov/rubert-base-cased')
text = "Russian text here..."
tokens = tokenizer(text, return_tensors='pt')
outputs = model(**tokens)
```
