

Logical Prompt 1

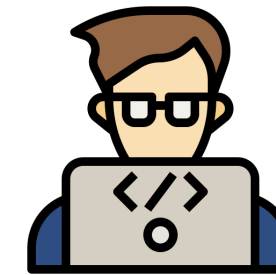

Create a **logical reasoning** problem with the *following persona*

An enthusiastic amateur golfer who is passionate about combining sports with philanthropic causes.

Logical Prompt 2

Create a **spatial reasoning** problem with the *following persona*

A senior software engineer who encourages the undergraduate to consider the social impact of their algorithms

Synthesized Text

Alex, an enthusiastic amateur golfer, participated in three charity golf tournaments last year, each supporting a different cause: Education, Health, and Environment. Each tournament was held in a different month: April, July, and October. Additionally, Alex finished in a different position in each tournament: 1st, 2nd, and 3rd.

Using the following clues, determine which cause was supported in each month and Alex's finishing position in each tournament:

The tournament supporting Education was held in April.
Alex finished 1st in the tournament held in July.
Alex finished 3rd in the tournament supporting Environment.

Context: A senior software engineer is working on a 5x5 grid of interconnected servers. Each server is a node connected by lines.

Challenge: Send a message from the top left to the bottom right server, avoiding servers connected to more than 3 other servers to prevent overload.

Question: What is the minimum number of servers the message needs to pass through to reach its destination without overloading any server?
